# Topics

- Call Methods in Managed Bean from JSF Page
- Conditional Navigation
- Full JSF Page Example

# Calling Managed Bean Methods

# Demo

1. Present user with a form with tour options
2. Based on the selection, send them to a different JSF page

Select a tour:

City  
Country

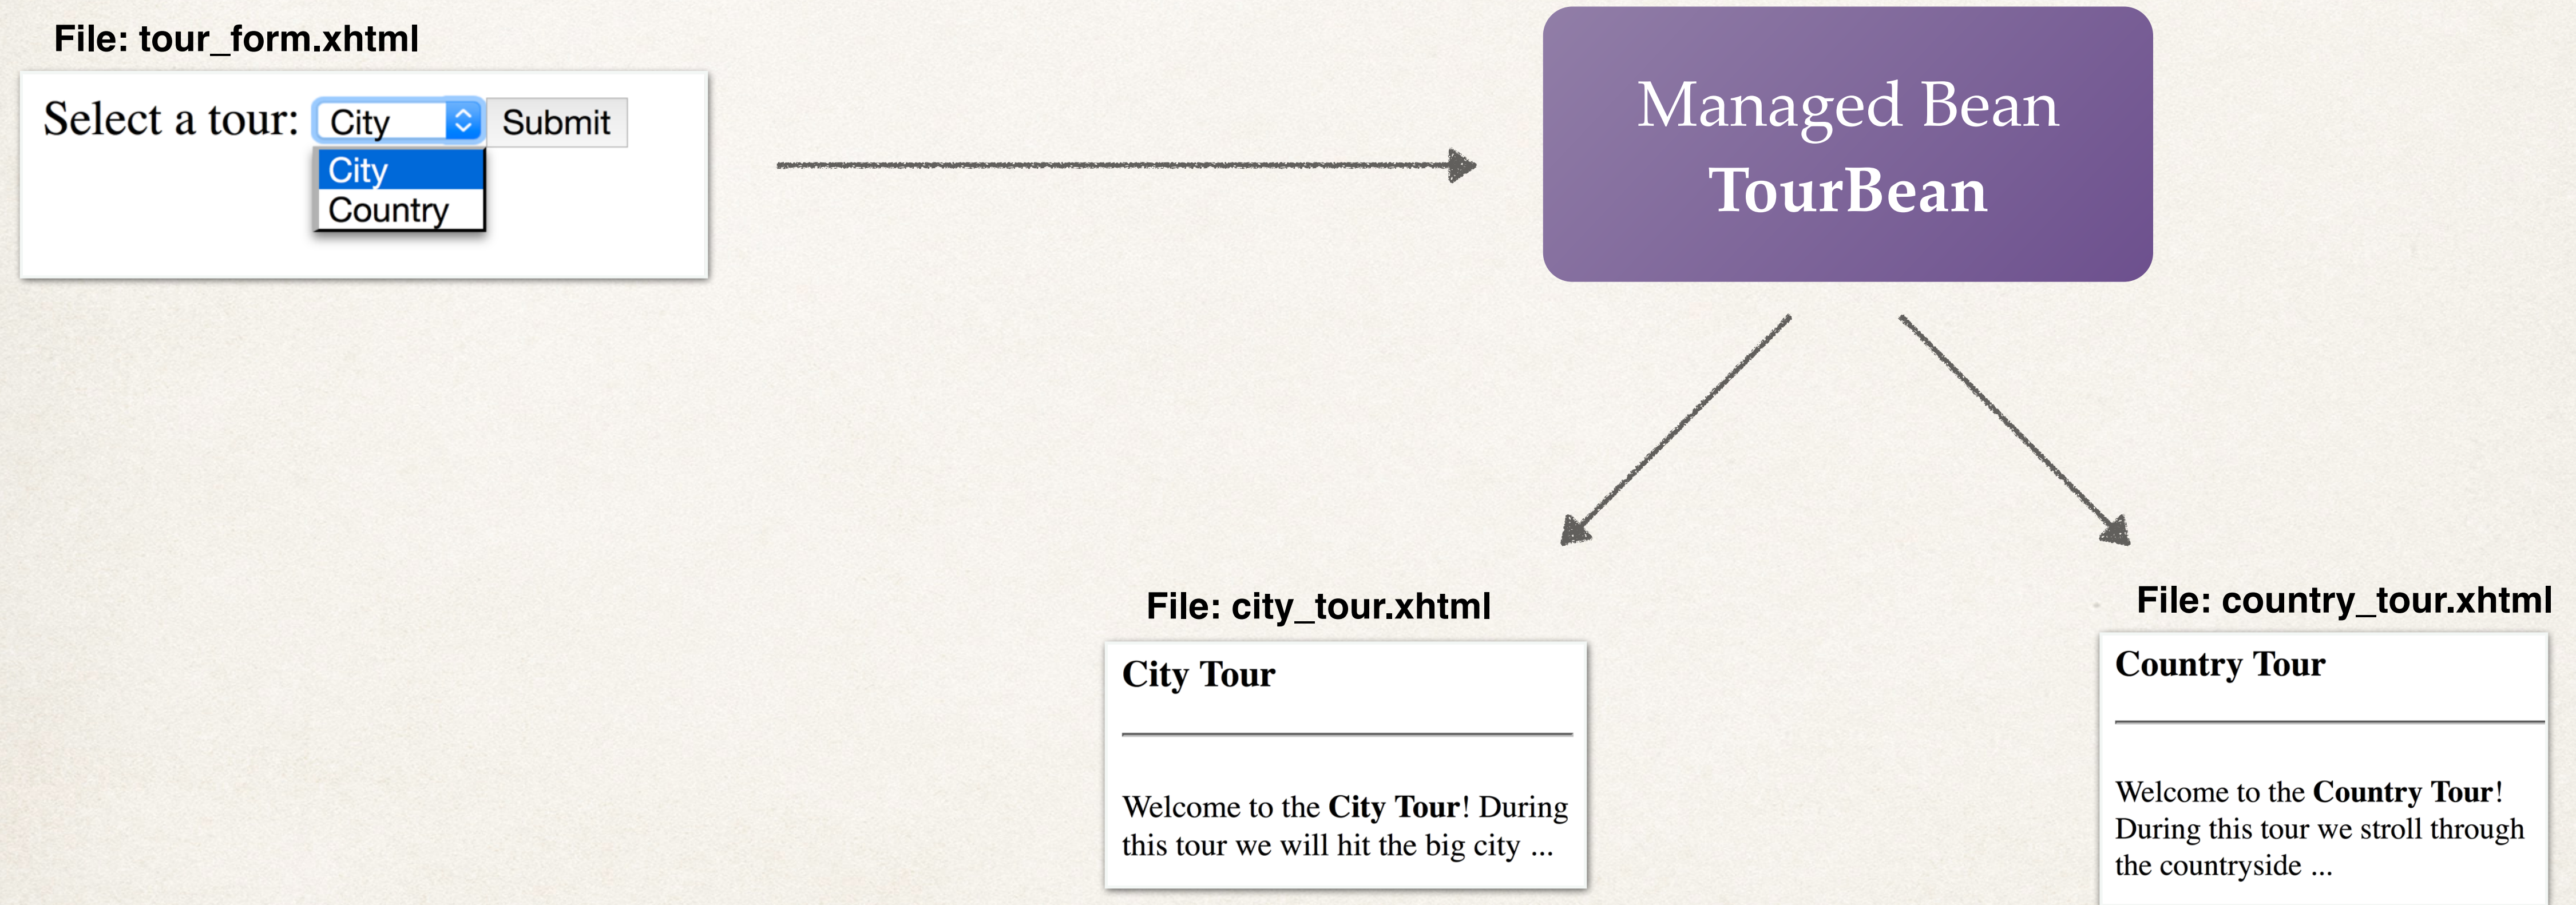

# Demo

Select a tour:  

# Pulling It All Together

# To Do List

1. Call Managed Bean from JSF page
2. Create a public method in the managed bean
  - A. Perform your business logic
  - B. Return the name of the view page

# Step 1 - Call Managed Bean from JSF page

```
<h:form>
```

Select a tour:

```
<h:selectOneMenu value="#{tourBean.kindOfTour}">  
    <f:selectItem itemLabel="City" itemValue="city" />  
    <f:selectItem itemLabel="Country" itemValue="country" />  
</h:selectOneMenu>  
  
<h:commandButton value="Submit" action="#{tourBean.startTheTour()}" />
```

```
</h:form>
```

Select a tour:  

City

Country

# Step 2 - Creating Method in Managed Bean

- Expose a public method in the managed bean
- Perform your business logic
- Return name of destination JSF page

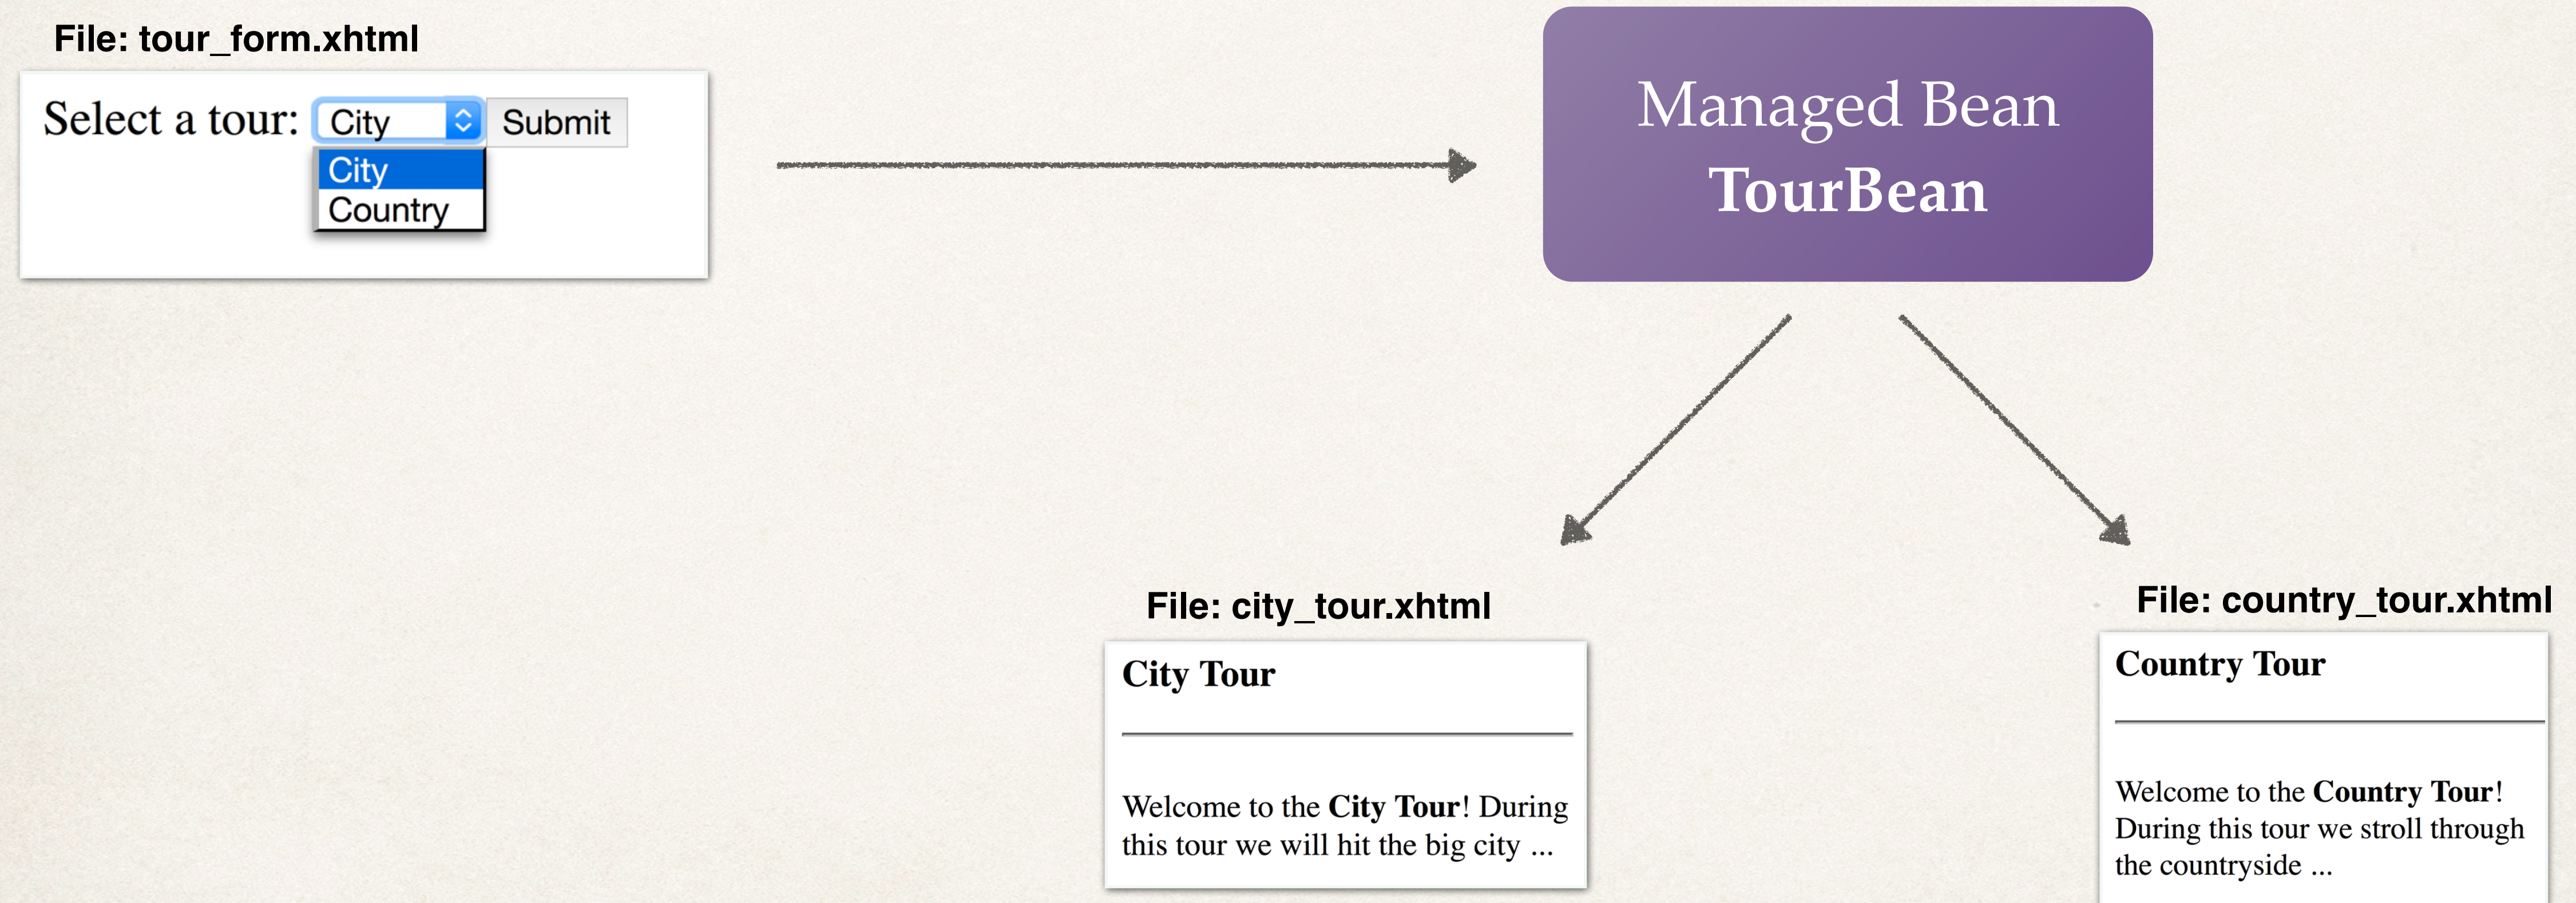

# Step 2 - Creating Method in Managed Bean

```
5 @ManagedBean
6 public class TourBean {
7
8     private String kindOfTour;
9
10    // constructor and getter/setters ...
11
12    public String startTheTour() {
13
14        if (kindOfTour != null && kindOfTour.equals("city")) {
15            return "city_tour";
16        }
17        else {
18            return "country_tour";
19        }
20    }
21
22 }
23
24
```
