MT Brainstorm a list of product names for a shoe that fits any foot size, in the style of Steve Jobs.

Return the results as a comma separated list, in this format:

Product description: A shoe that fits any foot size

Product names: [list of 3 product names]

Examples

Product description: A refrigerator that dispenses beer

Product names: iBarFridge, iFridgeBeer, iDrinkBeerFridge

Product description: A watch that can tell accurate time in space

Product names: iNaut, iSpace, iTime

Product description: A home milkshake maker

Product names: iShake, iSmoothie, iShake Mini

Here's a list of product names for a shoe that fits any foot size, in the style of Steve Jobs:

Product description: A shoe that fits any foot size

Product names: iFit, iStep, iMold

The screenshot shows a chat interface with a title bar "Synopsis for Marketing Memetics" and buttons for "Chat" and "Edit Chat". The main content is a light purple message box containing text about the book "Marketing Memetics". Below this is a light gray message box with a synopsis and a bulleted list. At the bottom is a text input field with the placeholder "Write a message..." and a send button.

Synopsis for Marketing Memetics

Memetics shows great promise, but is still pre-Mendel.

Nobody has meticulously traced the inheritance of thousands of memes. Nobody has worked out the math to predict meme transmission. Nobody has revealed the source code that would make memes programmable.

With advancements in machine learning, virtual reality, and neuroimaging, perhaps memetics' own Mendel, Fisher, Crick & Watson are right around the corner.````

Synopiospsis:

Here is a synopsis for the book "Marketing Memetics: Reverse-Engineering Creativity To Drive Brand Performance":

- Memetics is the study of how ideas spread between people, as proposed by Richard Dawkins in 1976. Memes are the cultural equivalent of genes; units of cultural information that propagate in the pool of human culture.

Code Generation

— — —
Dominant model in Cursor
for code writing

The screenshot shows a code editor interface with a dark theme. At the top, there is a search bar containing the text "rewrite to use anthropic claude @Web". Below the search bar, there are several buttons: "Submit Edit" (highlighted in blue), "quick question", "claude-3.5-sonnet", and "to toggle". The main area of the editor displays Python code for an asynchronous function named "generate_reasoning_path". The code includes a docstring, a call to "client.chat.completions.create" with parameters for "model", "messages", "temperature", and "max_tokens", and a return statement.

```
rewrite to use anthropic claude @Web  
↩ Submit Edit 🔍 quick question ⌵ claude-3.5-sonnet ↕ %K to toggle  
  
async def generate_reasoning_path(question, temperature=0.7):  
    """Generates a reasoning path using the OpenAI API asynchronously."""  
    response = await client.chat.completions.create(  
        model="gpt-4o",  
        messages=[  
            {"role": "system", "content": """You are a helpful assistant that  
            provides step-by-step reasoning for questions. Provide a  
            step-by-step reasoning and final answer as keys in JSON  
            step_by_step_reasoning, and final_answer."""},  
            {"role": "user", "content": f"{question}"}  
        ],  
        temperature=temperature,  
        max_tokens=1000  
    )  
    return response.choices[0].message.content
```
