

LLM Apps

Basic App: Ask an API

Problem

- Up to now, to request data from an external API we have to do it by writing code.
- Now we want to ask an API using natural language.

Solution

- Define the API and use a predefined chain to ask it questions.

Process

- Define the API: base url and endpoints.
- Create an APICChain with the API and the LLM.
- Ask the API using natural language.
