

# Introduction to C++ Standard Containers

## Exercises

- Give some examples of standard containers that you have already used in this course
- What is the main difference between a sequential container and an associative container in C++?

- What is meant by the term "key", in relation to C++ standard containers?
- What is the key used for?

- What are the two main types of associative container?
- Describe briefly these two associative container types
- Describe some operations that can be performed on associative containers
