

Write Algorithms

Exercises

- What do `replace()` and `replace_if()` do?
- What arguments do they take?
- Write a simple program that uses these two functions
- Write the equivalent code without using `replace()` and `replace_if()`

- What does `for_each()` do?
- What arguments does `for_each()` take?
- Write a simple program that uses this function
- Write the equivalent code without using `for_each()`

- When is it best to use a `for_each()` loop?
- When is it best to use a range for loop?
