

Pair Type Exercises

Pair Type

- Describe `std::pair`
- When is `std::pair` useful?
- How is this data accessed?
- How is a variable of type `std::pair` created?
- Direct construction, or by calling `std::make_pair()`

Creating a `std::pair` variable

- Write a program which creates an object of type `std::pair` and prints out its data

Function returning `std::pair`

- Write a program with a function which returns an `std::pair`
