

Unordered Associative Containers Exercises

Unordered Container Implementation

- Briefly describe how unordered associative containers are implemented in the C++ standard library

Element Search

- Which operator is used to search for an element in an unordered associative container?
- How does this differ from an ordered associative container?

Unordered M(ultim)ap Example

- Write a simple program which populates an unordered map object and prints out all its elements
- Modify your program to use an unordered multimap
