

1. Question — You have a dataset consisting of input data X and target variable Y as depicted in Table 1:

X	Y
1	-3
4	18
5	25
2	4
9	53
4	18
10	60

Table 1: Sample dataset

Perform linear regression to estimate w, b in order to solve $y_i = wx_i + b$
